1.Tell me something about yourself in brief

Well, I am a confident, hardworking and a very professional individual. I have always carried out all the tasks assigned to me without hesitation, provided the instructions from my Reporting Managers or seniors were clear. On the other hand, I am a creative person and I love to test my boundaries. In order to do so, I keep pushing myself to think out of the box!
As i started my carrier as a web developer from Kramsh software Techanalogy (Banglore),whre i developed and maintain college related web applications.after worked around 18 month i came back noida and join a product base company, AlphaVarna, there i developr CRM. During AlphaVarna i faced challege to create DropAndDown of cards from one colomn to another colom. during solving this challenge i lern lot concepts about DnD, than i switch to Igniterhub, and i main rennung web site there i work mostly on react.but before Igniterhub i worked on MERN Trchanalogt.

2.What are your strengths and weaknesses?

I am impatient which is the reason why I am a quick learner. But I honestly believe that being impatient is a real weakness. I expect my team members to prove themselves and start delivering on the very first assignment. In case a particular resource fails, I have a tendency to stop delegating work to them and pick up projects on my own. I am working on this attitude and in my previous organizations, my peers helped me cope up with this to a great extent. To compensate for my own weakness, I prep my people about my exact expectations. Then I give them a complete scope of the assignment followed by various "checkpoint" dates, where they can update me about their progress, with a demo/presentation if applicable. In my previous job as a Project Manager, I was handling a 15-member team of both individual contributors and Business Managers like Lawyers, Web Designers, Graphic Designers, SEO/SEM Consultants, Editors, Writers and Callers. I used to break the entire task down into manageable chunks for each employee, followed by stringent timelines about when they would circle back to me. This process worked brilliantly, helped me stay within the assigned budget and helped everyone achieve their individual targets, as they learnt.

3.You have changed jobs/jumped ship too many times already, why so?

I never expected to work with so many companies in these few years. The companies that I worked for were small and one of them was going through a really bad patch. But honestly, my journey has been a rewarding one. I can now confidently walk into a new situation and successfully figure out ways to make a difference. This was truly meant to happen and I wouldn't exchange all the experience I've gained from my switches, for anything! But I am seriously looking forward to not having to do this, any more in the near future. I want to make a stint that lasts for 5 to 10 years with a reputed organization, such as yours. This will make my career a stable and a fruitful one in the long run.

4.What are your strong points? or What are your strengths?

I am passionate towards my work and also a good listener, which means, I take my instructions seriously. I am not a person who leaves things midway. I never lose focus, even if I am under stress or have stringent deadlines to meet. I like to finish every single task on my to-do list completely. Optimism, energy and my ability to learn quickly let me hit the ground and rapidly solve problems. I also have good communication skills which means I can deal fairly well with my business clients as well as with the members of my internal team, in the future. Based on my skills, abilities, and experience, I know I would be a great addition to the team.

5.What did you do in the last year to improve your knowledge?

Being an L3 or senior level Windows/Linux Administrator I have mastered my virtualization experience on VMware, KVM, Xen, Hyper-V etc. I made sure to understand storage and networking better last year. I picked up PERL scripting last month and plan to pick up Ruby and Python in the next 3 months. I am also a beginner level programmer as I learnt C++. I mastered Chef on job and have deployed Amazon AWS to understand cloud better. I also earned my Red Hat Certified Engineer (RHCE) license and I am targeting RHCA by the end of 2017

6.What is your ideal company or workplace?

My ideal company is the one which can bring forth exciting challenges. Such opportunities will bring out the best in me as I can use my interests and experiences to grow. I like my present workplace as it offers all this along with a clean and professional work atmosphere, and more. But I am looking forward to a company that is actively involved in social welfare, and your organization does exactly that.

7.What is the difference between hard work and smart work?

Hard work is delivering work on time with more effort and smart work is delivering work on time, with lesser effort. I feel that is the basic difference. Most of the times, in the corporate world, I feel a combination of both is needed to attain excellence.

8.How do you feel about working weekends and night shifts?

Sir, my body clock has got tuned into regular weekday shifts from 9 to 6. I am not comfortable working nights and weekends on a regular basis, unless there is some urgent deliverable or a resource crunch in the team, I will surely pitch in. But working odd shifts is not good for the mental and physical health of employees and I hope you understand the same. Yet, if the company needs my presence mandatorily at night or during the weekend for continued growth and success, I will definitely work for it.

9.Where do you see yourself 3 years from now? or Where do you see yourself in 5 years?

My current goal is to find a career spot that ensures continued growth alongside new challenges daily. 3 years from now, I see myself as an experienced and reliable senior in the team and 5 years from now, I assume that I will be ready to take up managerial responsibilities like product strategy. I want to have a stable career in a single organization and hope I will get the same wherever I start.

10.What has been your greatest failure?

I could not secure a perfect 100/100 in my Math paper in 12th Standard, despite my hard work. That is my greatest failure till date.
